

**Barnwell Disposal Site
Sealed Source Disposal Capacity Registration Option
Posted November 26, 2008**

- There is a 500 cubic foot “set-aside” for sealed sources from today through June 30, 2008. We may be able to increase this volume if conditions allow and there is sufficient demand. We may need to withdraw some or all set-aside volume that is not yet reserved if conditions warrant.
- While there is set-aside capacity still available, brokers/generators may reserve volume for sealed source disposal on a first-come, first-served basis by paying a \$2,312 per cubic foot (the minimum disposal rate for sealed sources) deposit. The deposit is non-refundable, except as indicated below.
- The pre-paid deposit will be refunded only if the Barnwell site is unable to accept the waste. In the event that the Barnwell site cannot accept the subject waste or any portion of the subject waste, then the exclusive remedy for Customer is return of any payment made for reservation of the disposal capacity.
- The disposal rate will be assessed in accordance with the Rate Schedule for Disposal on Non-Atlantic Compact Waste, which specifies a minimum disposal rate for sealed sources of \$2,312 per cubic foot. In the event that the actual disposal rate for a waste container exceeds \$2,312 per cubic foot, then Chem-Nuclear will invoice Customer for the difference.
- Customers may also dispose of sealed sources without reserving volume in advance, if there is capacity available from the sealed source set-aside volume.
- For details on how to reserve space, contact Deborah Ogilvie at Chem-Nuclear (803-758-1825).
